# The first Android™ SMIL Player for commercial usage.

SMILdroid™ is an Android™ based Digital Signage software based upon the SMIL standard, that allows you to display content on almost any Android™ device with Android™ 2.3 or higher.

## INTERACTIVE MENU

On touch it displays the menu and the user can jump to a content.

## SLIDE MODE

The user can slide from one content to the other, similar to iOS photos.

## WHAT IS SMIL?

*Synchronized Multimedia Integration Language* allows presenting media items such as text, images, video, audio, links to other SMIL presentations and files from multiple web servers.

## FEATURES

- playlists, event-driven playback
- USB content distribution
- WEB CMS content distribution
- Dropbox content distribution
- automatic interactivity with touch-screen devices
